

Tech Task – Online Digital Platform Website

This service allows users to choose a digital product category and purchase relevant offerings, such as online courses, downloadable tools/templates, or memberships to premium digital services.

The new website will function as a **digital marketplace platform**. It will provide structured access to three major product categories, each with flexible delivery options:

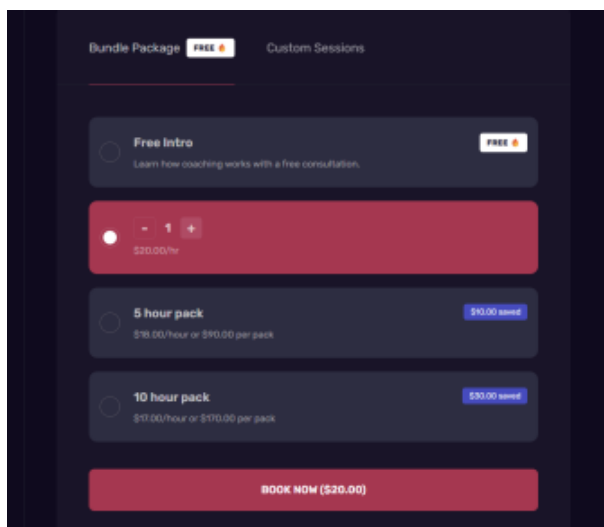

1. Online Courses

Users can select from multiple **online learning modules** in areas such as:

- **Marketing strategy courses**
- **Video editing tutorials** (e.g., DaVinci Resolve, Adobe Premiere Pro, After Effects)
- **Content creation or personal branding courses**

Each course listing will include:

- **5+ individual instructors** for each subject/topic
- A **brief description** of each instructor's expertise, background, or certifications
- **3+ time/package options** per instructor (e.g., 1h private session, full course access, weekly mentorship plan)

2. Digital Templates / Tools / Add-ons

This section will offer downloadable resources for creative and tech users, such as:

- **Website UI kits / Elementor / Webflow templates**
- **Canva or Figma assets**
- **DaVinci / Premiere / Photoshop templates or LUTs**
- **Notion templates, code snippets, productivity tools**

Each digital asset will be tagged by:

- Supported platform (e.g., Adobe, Figma, Webflow, Shopify, WordPress, etc.)
 - Creator/author identity
 - License type and usage rights
 - Package options (single file, bundle, unlimited download subscription)
-

3. Digital Memberships

The site will also allow users to purchase or activate **premium digital memberships**, including:

- **Software subscriptions:** Microsoft 365, Adobe Creative Cloud, Notion AI
- **Messaging platforms:** Telegram Premium, Discord Nitro
- **Entertainment/utility access:** Tinder Plus/Gold, Grammarly Premium, Spotify, YouTube Premium
- **VPN and security tools**

Each membership page will include:

- Service overview
- Activation method (e.g., redeem key, email-linked)
- Duration options (1 month, 3 months, 1 year)
- Optional auto-renew or gift to others

Booking System (Frontend Only, No Backend)

Each instructor should have a **"Book Now"** button.

- Clicking it will direct the user to a **login or registration page**.
- The **login** should be inactive, since we don't have a database to verify if a user is registered or not, all login attempts should be redirected to the registration form with a message like:

"Please create an account."

- After registration, the user should be **emulated as logged in**:
 - Show the **user's name** in the top-right corner.
 - Include a **Logout** option.
 - All of this should be handled **with JavaScript only** — no backend, just emulation.

Once logged in:

- Clicking **"Book Now"** again should **trigger a pop-up form** with the following inputs:
 - Name
 - Email
 - Phone number
 - Optional: Comments (textarea)
 - Booking date (use a calendar component):
 - Show the **next 5 days as available**
 - Show a few upcoming dates as **fully booked** (to make it feel real)

After the form is submitted:

- Show a **confirmation popup** with a message like:

“We’ll get back to you ASAP via email.”

Design Guidelines

- Include a beautiful **hero section**.
- Use **video**, **testimonials/reviews**, and other modern UI elements.

Examples:

You can use products and courses from the examples below:

-Digital Products Platforms (Templates, Tools, Add-ons):

1. creativemarket.com
2. ui8.net
3. motionarray.com
4. elements.envato.com

-Online Course Platforms (Live & On-Demand)

1. udemy.com
2. skillshare.com
3. teachable.com
4. coursera.org

-Digital Membership & Software License Platforms

1. stacksocial.com
2. appsumo.com
3. setapp.com
4. keysworlds.com
5. eneba.com
6. g2a.com

1. Website Assets

- Favicon: Provide a custom favicon for the site.
- Logo: Design a logo matching the website topic.
- Use call to action text on all websites, like (register now to get some bonus with an action button to register)
- In the footer, please add this text :
“ We are not an affiliate agency. All products are sold independently through our platform.”

2. SEO & Metadata

- Meta Keywords: 8-10 relevant keywords per page.
- Meta Description: 90-200 characters (not words) describing the page content.
- Meta Title: 30-70 characters describing the page.
- Canonical Tag: Include a canonical URL for each page.

3. Content & Design Guidelines

- Humanized Text: Ensure all copy feels natural and authentic.
- Image Naming: Use descriptive filenames (avoid generic names like 'image1', 'unsplash').

- Local Images: Host all images locally (except icon fonts). Avoid using large images (such as big JPEG files). We need a website with a fast page loading speed.

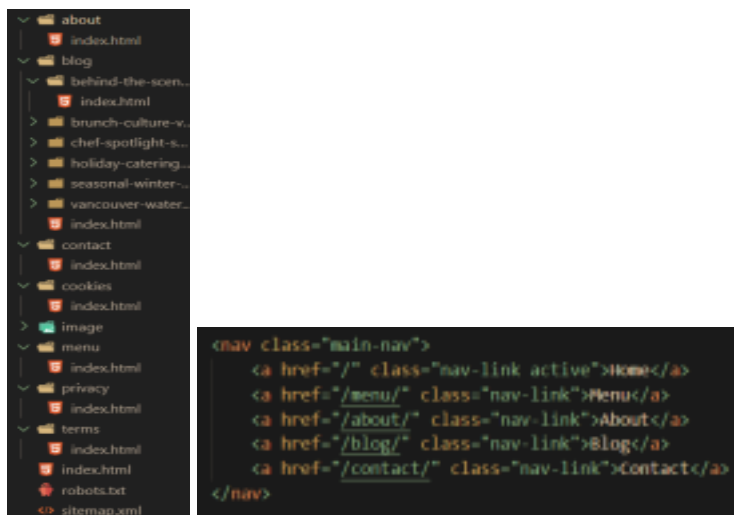

4. Technical & File Structure

- JavaScript Links: Avoid href="#"; use href="javascript:void(0)"instead.
- Folder Structure:
- index.html

- contact/index.html
- privacy/index.html ...

- URL Paths: Use directory paths without specifying

index.html (e.g., href="/contact/").

5. Mandatory Pages

- Privacy Policy (min 500 words)
- Terms of Service (min 800 words)
- Cookies Policy (cookies pop up on each page with local storage) (min 300 words)

- Log in / Sign in

- Blog / News / Articles

- Products page (shop, skins , mods , cards , can have different names)

5.1 Blog Requirements

- Minimum of 4-6 relevant blog posts on the website.
- Each post must be on its own page (e.g., `blog/blogName/index.html`) with the correct path usage (`../blogName/`).

6. Contact info

- mail as: info@domainname.com
- A real random phone number from geo we'll provide

7. General Rules

- Use authentic design consistent with the business's branding.
- Do not use placeholder links or content.
- Ensure all features are fully functional and tested.
- Maintain clean, readable code and proper indentation.
- Responsive Design: All websites must be fully responsive for mobile devices.
- Avoid using large images (such as big JPEG files). We need a website with a fast page loading speed.
- All buttons and similar elements must be fully functional.
- Avoid using external links; no links should lead to other websites from ours.
- We need vanilla HTML, CSS, and JavaScript. You may use libraries such as Tailwind, Bootstrap, or slider plugins if required.
- Please send the ZIP archive with the folder named after the domain (e.g., example.com).
- Please don't use these default AI-generated icons , they make the website look unrealistic and unprofessional.
